Auto-transmitting Diagram

One garden light can transmit the signals from the remote control to another garden light within 30m, as long as there is a garden light within 30m, the remote control distance can be limitless.

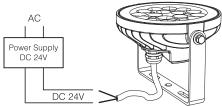

Auto-synchronization function

Different garden light can work synchronously when they are started at different times, controlled by the same remote, under same dynamic mode and with same speed, and within 30m distance.

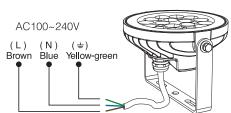

FUTC01 Connection diagram

Input Voltage DC 24V, don't need to distinguish polarity on the connection

Attention

- 1. When install the lighting fixtures, pls switch off the power to make sure the safty.
- Please check whether the input voltage supply is in accordance with the lighting fixtures, and please check the connection of both the cathode and anode.

- The working power is high voltage alternating current, so it must be far away from people and must with ground connection.
- Non-professional user cannot dismantle the lighting fixtures directly, otherwise, it may cause fire and electric shock.
- The working temperature is -20-60°C; do not use the device to direct sunlight, moist and other high temperature area.
- Please do not use lighting fixtures around the mental area and high magnetic field, otherwise, it will badly affect the control distance.
- 7. Users must be correct, strict and solid to install the lighting fixtures; do not use the lighting fixtures on strenuous vibration area.
- 8. The lighting fixtures will be heating on working, pls do not cover the lighting housing.
